Top 10 Product Brands by Current Sales vs. Average Order Value

Stores Regions by Current Quantity Sold vs. Returns

Key Insights

- Sales increased by 112.15% vs LY, driven by sales reactivated in regions of Mexico and Canada West
- Return Rate increased by 0.84% vs. LY. It increased by 6.96% in 2025 Qtr 4 vs. LQ, caused by 10.81% increased on quantity sold.

- Average Order Value increased by 15.24% vs LY. While it was diluted by temporarily reactivated customers LM, it increased by 2.3% in Dec25.

Key Alert

- SW region faces greater challenge in retaining existing customers vs. LY, especially in Los Angeles district, with 4.16% YoY dropped in 2025 Qtr 4.

Even Sales Boost event in Nov25 didn't help, Sales dropped 21.62% in Dec25, while Return Rate increased by 20.11%. Might need more info to investigate deeply whether customers left in SW region was caused by products returned.

Key Insights

Sales boost event in Nov25 has attracted 16.82% of 90+ days inactive customers. While the improvement of reactivation customers rate still remain high in Dec25, higher returned customers might be caused by the holiday effect.

In SW region, increased dormant customers, decreased reactivated customers plus higher return rate in Dec25 might reveal some customers left due to products they were unhappy about (need verification).

Monthly Active Products and Lost-Sales Rate

Key Insights

There were no transaction data for CDR Grape Jelly in 2024 and 2025, need to be clarified with Sales team on any sales plans for this product.

Increased number of products (e.g. cheese-related products) sold in Nov25 in SW region got no more sales in Dec25, might reveal about 36% of products sold in Nov25 Sales Boost event were one-off purchased by customers.

Top 10 Stores By Sales vs. Average Order Value

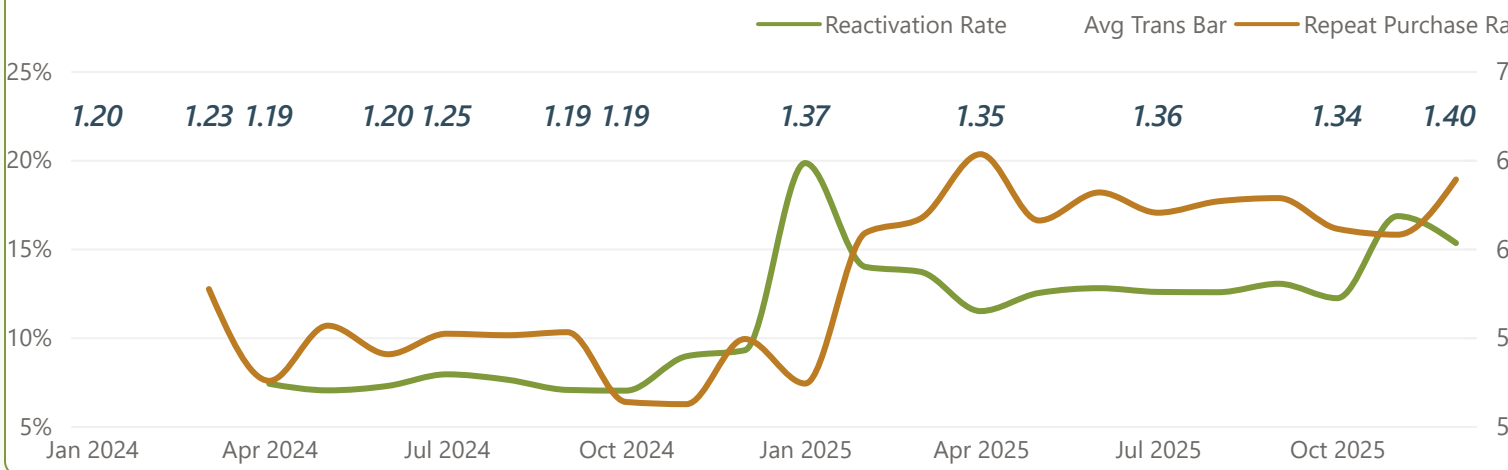

Pareto Analysis

Net Revenue, Return Rate and PoP % by Month

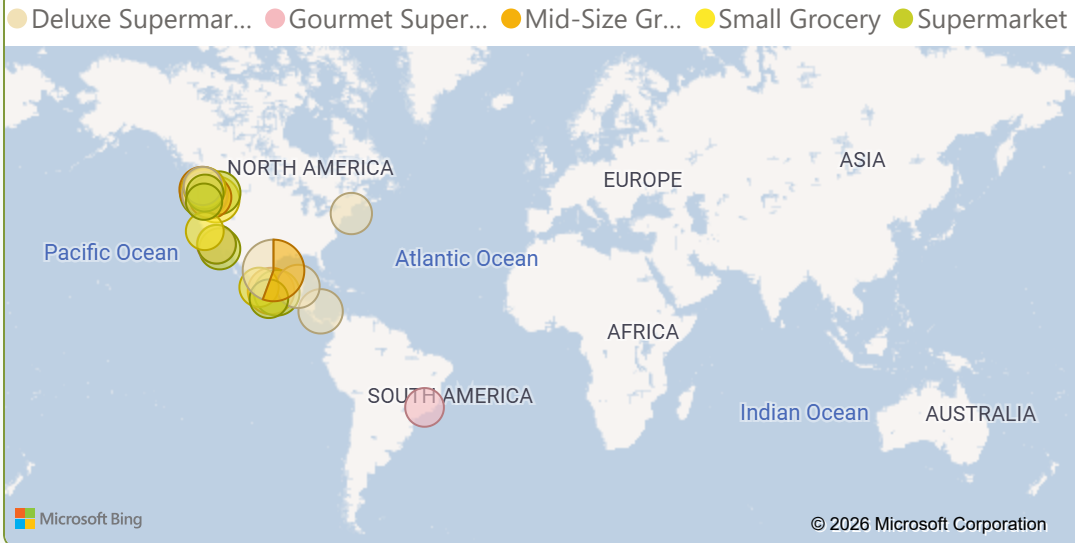

Reactivation Rate, Avg Trans Bar and Repeat Purchase Rate by Month

Key Insights

The Nov25 Sales Boost event helped Supermarkets taking back Revenue leading position. Sales increased by 34.14% than Oct25, while the rate raised to 25.82% in Qtr4 vs. Qtr3 2025. In Dec25, ↓ customer reactivation rate, ↑ repeat purchase rate and higher Average Transactions might indicate more attracted customers in Nov25 made repeat purchases, signalling potential early customer retention.

Assumptions & Notes

Clarify the key information about data source, data manipulation & measures calculation

Data

- a. This data is from Maven Market, a multi-national grocery chain with locations in Canada, Mexico and the US
- b. This data represents daily operations of grocery retail business, including customer purchases & returns transactions, customers & products information, stores details and regional hierarchy
- c. There are some information required for more deeper analysis, e.g. new registered customers in the period which fact tables fell into, for RFM analysis or Customer Cohort Analysis. So this report analyses on the available data
- d. All dates on calendar, transactions and returns table were all dated in year 1997 and 1998, so added 27yrs on top of those dates to align the dataset with the current reporting period and enable realistic relative-date calculations
- e. All dates on dimension tables - customers (birth_date, acct_opened_date), stores (first_opened_date, last_remodel_date) were too old and become unmeaningful for the analysis, so added 28yrs on top of those dates to match with the calendar and fact tables
- f. The financial year period is set to between 1st January and 31st December, so as to have the data covering exactly 2 financial years

Fact Tables

• Transactions Data

- a. There're no data of transaction id, so for those transactions made by the same customer on the same date, treated as 1 transaction
- b. There're no transactions and returns data for regions of Mexico (central, south, east) and Canada West in 2024, however no stores in those regions were firstly opened or remodeled in 2024 and 2025. So we might need further information to investigate and understand this situation more deeply. It might be caused by technical issues, such as data lost for those regions or they might have some issues on transporting the local data to the system used by head office.
- c. There're no transaction data for CDR Grape Jelly in 2024 and 2025, need to clarify with the sales team if there were any plans to sell this product or any issues to restock this product so as to understand if the missing data was caused by business plans or technical issues

• Returns Data

- a. There're no data of return id, so for each returns line, treated as each individual returns made on different transactions/orders as there are no related customer id and transaction/order id
- b. As there're no clear instructions on how did the business deal with returned products, this report treats all returns as returned to stock for resale
- c. As there're no related transaction id on those Returned Items, it's hard to reflect the reaction between actual buys and returns, i.e. which transaction (which customer id purchased on what date) the return line related to
- d. There're no returns data for Small Grocery, might need further information such as Return Policy to see if there're actually no return requirement by clients or it's caused by No Return Policy

Glossary - Customers & Products

- a. Period - selected period granularity, could be Quarter/Month/Week
- b. Inactive Customers - Customers ID with no transactions for 90+ days before beginning of the period
- c. Reactivated Customers - Inactive Customers made at least 1 purchase within the period
- d. Successful Reactivation - Reactivated Customers made at least 1 purchase within the next 90days after end of the period
- e. Failed Reactivation - Reactivated Customers with no purchases within the next 90days after end of the period
- f. Dormant Customers - Customers ID made at least 1 purchase within 90days before beginning of the period but stop buying within the period
- g. Active Customers - Customer ID made at least 1 purchase within the period
- h. Repeat Purchase - Customers made at least 1 purchase within the period and at least 1 purchase within 90days before the end of the period
- i. Active Products - Product SKU were in at least 1 order/transaction within the period
- j. Lost-Sales Products - Products were in at least 1 order/transaction last month but were not in any order/transaction this month

Dimension Tables

• Customers Table

Couldn't discover the accurate data of new customers and lost customers as all customer accounts were created before the transaction data, so all customers on the table are returning customers

• Product Table

- a. Might need product categories data for more deeper analysis, such as performance of each product category. This report analyses at the brand level due to the unavailable product hierarchy (e.g. category) in the dataset. Brand-level analysis is used as the primary product segmentation, with drill-down to individual products where relevant
- b. Only used Product Retail Price. If discount price scenario is provided, we might be able to have a much more variable and realistic results on revenue, profit and margin etc.
